

REDUCING OPERATOR RISK ON SERVOHYDRAULIC SYSTEMS

ONLINE TRAINING COURSE

Instron® eLearning

Our eLearning course is specifically tailored for Servohydraulic operators and health and safety representatives who wish to identify the hazards and risks when using a Servohydraulic system. This course will be available for a single viewing, completion within 90 days of purchase date. For group rates please contact Instron Training.

Course Description

Prerequisites:

- Must be trained to use a Servohydraulic system.

Duration:

- Approximately 14 Minutes

Payment Options:

- Paypal, Credit Card, or Standard Company Purchase Order

The eLearning course, Reducing Operator Risk on Servohydraulic Systems, is an online based overview to safer and reduced risk operation. The course is ideally suited to all trained Servo Hydraulic operators and experienced users.

Topics Include:

- Servohydraulic System Overview
- Good House Keeping
- Operator Hazards
- Test Frame Hazards
- Hydraulic Oil Exposure

Who Should Attend:

- Servohydraulic System Operators
- Lab Managers
- Health and Safety Representatives

Course Objective

After completing this course, the participant will have gained additional knowledge how to safely operate a Servohydraulic system and will be more aware of the hazards associated with material testing with a Servohydraulic system.
